

BULLET RESISTANT PANELS

PANELS TO PROTECT THE WALL AROUND YOUR PASS-THRU SYSTEM

BULLET RESISTANT PANELS

Quikservs' bullet resistant panels are installed behind the wall surrounding your pass-thru system to ensure you have a complete security solution in place to protect the people on the secure side of your pass-thru system. The wall is actually the 2nd most common place to be shot after the glazing on the pass-thru system.

When the panels are hit with a projectile it begins a process called 'controlled delamination' which separates the layers and absorbs the bullet's energy across the panel until it is stopped and 'caught' in the panel. The intent of these panels is to capture the bullet instead of deflecting it in order to minimize the risks and danger of ricochet.

The panels are comprised of woven roving ballistic grade fiber. The fiber is mechanically injected with a thermostat polyester resin and placed into a hydraulic hot press where it is compressed into flat rigid sheets. The panels are made with a consistent and uniform resin to fiber ratio which allows the appropriate composition to effectively capture projectiles.

All of our panels are UL Listed to ensure the highest quality standards and approved by the U.S. Marshal Service, the General Services Administration and complies with NIJ.

STANDARD FEATURES

- Panels are available in 3' and 4' widths and 8', 9' and 10' lengths
- Available in bullet resistant protection levels 1-8
- One hour fire rated to ASTM E119-00a Building Construction and Materials
